What's New in Sage 100 2025.0

The latest release of Sage 100 delivers many of the features and enhancements our customers have suggested. This document provides an overview of the most notable new capabilities. For complete details on these and additional enhancements, please refer to the release notes that are posted on Sage Community Hub.

Sage

Sage 100 2025.0 Release April 2025

This release delivers on Sage's commitment to focus on feedback from our customers and business partners to continuously refine the solution to meet the most pressing business challenges. This release includes over 25 enhancements, the most notable of which follow.

Procurement

Request for Quote/Purchase Orders

Paperless office is of great value to many customers to expedite purchase orders. With this new release, i) a quote can be created in Purchase Order Entry, ii) a Request for Quote can be emailed to one or multiple vendors using Paperless Office, and iii) the quote will be maintained in Quote History.

Within the Purchase Order module, a new option has been added that can require a cancellation code when deleting orders or quotes.

Accounts Payable

A new *Switch View* button enables easy toggling between a grid and list view to make managing payments to suppliers simpler.

Sales & Customer Management

Sales Orders & Accounts Receivable

The parameters by which Sage 100 customers bill and collect from their customers vary widely. To enable customers to conduct business in the way they want, we strive to provide a high level of flexibility. In this latest release, the option to expand the invoice number length from 7 to up to 20 characters has been added in the Accounts Receivable, Sales Order and Job Cost modules. In turn, associated forms, reports and screens are automatically changed to reflect this.

Additionally, there is now the capability to easily copy package tracking numbers so they can be pasted into emails or other documents to minimize the risk of error.

Within the Accounts Receivable module, additional capability has been added to make it easier to view details of the last invoice date and amount posted for a specific customer. Also, a new option has been added that enables printing of extended item descriptions.

Sage

Operations

Inventory Management & Planning
For Manufacturing and Distribution companies, detailed Inventory Management is essential for meeting orders on time and in full. The latest release of Sage 100 adds new optional capabilities. On the Item Maintenance Additional tab, a Universal Product Code (UPC) or European Article Number (EAN) can be added. Also, to make inquiries easier, the ability to sort by product line has been added to the Physical Count Reports.

New optional printing capabilities have also been added. There is now the ability to print extended item descriptions on the Physical Count Worksheet. Also, the ability to exclude items with zero balances has been added to the Inventory Trial Balance.

To simplify inventory balance inquiries, a new Production/Purchase Quantity column has been added to the Detail view of the Inventory Requirements Planning (IRP) Inquiry.

Production Management
The latest enhancements provide better insight into costs and drive greater efficiency in production. A standard cost rate per piece can be established for an activity code to calculate labor costs. This provides the flexibility needed to define a standard cost rate per hour or per piece.

Responsiveness & Insight

Audit Tracking
Confidence is key for running your business and that includes the ability for critical audit tracking. With the latest release, customers can enable audit tracking for sales orders and purchase orders. These can be easily accessed via the new *Audit Viewer* button. Details on all changes, deletions and additions can be retained and viewed on the new Sales Order Audit Report and Purchase Order Audit Report.

Business Insight
Providing easily accessible and customizable Business Insight is a benefit of Sage 100. With the latest release, new secondary views have been added to the PO Request for Quote. This provides better insight on a single page, helping to expedite inquiries and related actions.
